

Education

Tufts University

Bachelor of Science, Electrical Engineering and Biomedical Engineering

GPA: 4.0

Medford/Somerville, MA

Expected May 2029

Weston High School

GPA: 3.97 UW

Relevant STEM APs (all 5s on exams): Calc BC, Statistics, Physics C Mechanics, Physics C E&M, Biology, Chemistry.

Harvard Summer & Extension Schools: Linear Algebra, Multivariable Calculus.

Weston, MA June 2025

Math and Quantitative Work

- Published novel proof of Holditch's Theorem with my friend from Multivariable Calculus class while in high school.
- Self-studied BC Calc in a month and scored a 5 on the AP exam without having taken any prior calculus or pre-calc.
- Took junior EE Probability/Statistics at Tufts with focus on Gen AI as the only freshman in the class and got an A+.
- Proficient in C++ & Python; built software for VulcanForms, Morningside, Collage AI, Tufts IDEA Lab "Plastibot".

Experience

VulcanForms (Large-scale LPBF metal manufacturing)

Devens, MA

Engineering Intern (paid)

June 2026 – August 2026

- Optimized several laser marking protocols for mass-production parts with original experimental design and analysis.
- Designed in CAD and built custom manufacturing process fixtures optimized for ergonomics and efficiency.
- Developed manufacturing execution data management system with Python in Ignition to track parts in all production phases.

The Stout Lab (Cellular Agriculture Commercialization Lab)

Medford/Somerville, MA

Undergraduate Researcher (paid)

January 2026 – Present

- Design, implement, and test genetic engineering and media configurations for faster cell growth, differentiation optimization, and suspension viability.
- Train/mentor new lab members in standard protocols and sterile technique, and to envision their own projects.

Tufts IDEA Lab (Innovation, Design, Engineering, and Analysis/Applications)

Medford/Somerville, MA

Plastibot Project Leader

September 2025 – Present

- Lead project using hyperspectral imaging and machine learning to identify different kinds of plastic to enable higher quality recycling.
- Built a new convolutional neural network with keras in Python which is 85% accurate across 6 plastic types and 9 colors, a 15% improvement over last year's model.

Collage AI, Inc. (AI EdTech Startup devised as a Morningside summer project)

Cambridge, MA / Remote

Product and GTM Team Member (paid)

September 2025 – Present

- Execute, advise, and oversee the product vision for AI-native platform that streamlines flipped classroom implementation and empowers educators with real-time learning analytics.
- Pressure-test software developments and ideate improvements to user interface/experience.
- Construct and present pitch decks, competitive landscape research, and product demos.

Morningside (Family Office Venture Capital)

Cambridge, MA

Analyst Intern (paid)

June 2025 – August 2025

- Selected for position based on prior performance at Morningside portfolio company Yardsy.
- Evaluated investment pitches and conducted due diligence on startups.
- Researched applications of AI in clinical trial optimization; met with potential partner companies.
- Envisioned and launched "Collage AI, Inc." AI educational technology company; held strategy sessions with Harvard faculty, designed UI/UX in Figma; advised on the acquisition of founding asset "Studywise".
- Initiated project to rapidly learn Python and create working proof-of-concept for Collage AI in one day.
- Continued close work with Yardsy (from prior summer): presented strategy research at weekly board meetings; produced advisory materials and acquisition exploration; guided personalized marketing and a pivot to B2B.
